

Project Design Phase
Proposed Solution Template

Date	18 July 2026
Team ID	
Project Name	HouseHunt – Premium House Rental Marketplace
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1. 1	Problem Statement (Problem to be solved)	Traditional house rental workflows rely on fake or unverified listings, manual booking procedures, delayed communication between renters and owners, poor record-keeping and a complete lack of centralized administration — making it hard for renters to trust listings and for owners to manage enquiries efficiently.
2. 2	Idea / Solution description	HouseHunt is an integrated MERN-stack marketplace that connects renters, property owners and administrators through dedicated role-based dashboards, covering the full journey of searching, listing, touring, negotiating and managing rental properties in one place.
3. 3	Novelty / Uniqueness	A built-in rent negotiation and counter-offer workflow, real-time chat between renter and owner, a wallet system with automatic GST and commission calculation, and an AI-assisted listing moderation console for admins set HouseHunt apart from typical listing-only rental sites.
4. 4	Social Impact / Customer Satisfaction	Verified, admin-approved listings and transparent negotiation reduce fraud and back-and-forth calls; a dedicated complaint centre lets renters flag issues (e.g. incorrect listing details) and get them resolved quickly, improving trust and overall satisfaction.
5. 5	Business Model (Revenue Model)	Revenue is generated through a platform commission and GST charged on each completed booking/rent transaction, tracked

		automatically in the wallet ledger; this can be extended with premium/featured listing plans for owners.
6. 6	Scalability of the Solution	A three-tier architecture (React/Vite client, Express/Node API, MongoDB via Mongoose) with modular controllers and role-based access control lets new capabilities — payment gateway integration, mobile apps, AI recommendations — be added without redesigning the core platform, and the current serverless deployment on Vercel scales with demand.
